

List of Previous Emergency Uses of Test Articles at SLU

FDA regulations require that any subsequent use of the investigational product at the institution have prospective IRB review and approval. FDA acknowledges, however, that it would be inappropriate to deny emergency treatment to a second individual if the only obstacle is that the IRB has not had sufficient time to convene a meeting to review the issue.

Test Article*
Adefovir Dipivoxil
ALIMTA® (pemetrexed)
All-Trans Retinoic Acid (ATRA) IV (Liposomal-Tretinoin)
Amiodarone I.V.
Amphotericin B Lipid Complex (ABLC)
AR623-41 (Liposomal Retinoic Acid)
Brincidofovir
Caplacizumab
Ceprate TCD System
Compound 506U78
Defibrotide
Extracorporeal Porcine Hepatocyte Perfusion
Gilteritinib
I.V. Sodium Benzoate and Sodium Pheylbutyrate
Inhaled Nitric Oxide
Linezolid
m-(131I) Iodobenzylguanadine
Mylotarg
Nitric Oxide
Pantethine
Pleconaril
Prochymal
Recombinant Human Activated Protein C
Respiratory Syncytial Virus Immune Globulin Intravenous
Sofosbuvir
Sygen
Synercid
Temodal
Tertrahydrobiopterin
Thalidomide
Thymosin- -1
TPI 287
Voraxaze
VSD Closure Device by AGA

**Please note: Test articles are listed by the name reported to the IRB. Please look for a product by known trade names, generic names, or common misspellings.*
